Innovative AI Solutions Developer & Entrepreneur

Results-driven technology entrepreneur and senior machine learning architect with 20+ years of enterprise experience and a proven track record in developing comprehensive AI-powered business platforms. Currently leading cutting-edge ML initiatives at Lowe's while simultaneously building 10 AI-powered platforms across legal, hospitality, financial, trading/investment, government contracting, cybersecurity, and business management sectors. Expert in democratizing AI technology for small and medium businesses through accessible, secure, and scalable solutions.

Entrepreneurial AI Platform Portfolio

Founder & Lead Developer | 10 AI-Powered Platforms | Ongoing
GitHub Repository: <https://github.com/eakarsu>

Successfully conceptualized, developed, and launched a comprehensive ecosystem of AI-powered business platforms spanning multiple industries. This portfolio demonstrates exceptional entrepreneurial vision and technical execution, with each platform addressing specific market needs through cutting-edge AI integration and scalable architecture design.

Legal Technology & Document Processing Innovation

<https://legalaiforms.com> (Username: eakarsu@gmail.com, Password: Selman#33)

- AI-powered legal document generation platform covering multiple practice areas including business formation, real estate contracts, family law, and estate planning
- Secure user authentication system with professional-grade document customization tools
- Multi-format document downloads (PDF, Word, Text) with AI-assisted legal compliance checking
- Market differentiation: Democratizes legal document creation for SMBs while maintaining attorney review recommendations

<https://norshin.com> (PDFGenius)

- Advanced PDF data extraction platform achieving 99% accuracy using proprietary Vision AI technology
- Enterprise-grade document processing for multi-column layouts, tables, and scanned documents
- Professional business operations with dedicated support (support@norshin.com, +1 (804) 360-1120)
- Richmond, VA headquarters at Hampton Woods Dr, Henrico VA 23233
- Scalable architecture handling high-volume document processing for business-critical applications

Food Service & Hospitality Solutions

<https://orderlybite.com>

- Revolutionary multi-channel ordering platform featuring SMS and real phone ordering capabilities with voice call integration
- AI-powered menu optimization with intelligent recommendations and real-time order tracking
- Privacy-focused architecture with minimal data collection approach

- Innovative customer engagement bridging traditional phone ordering with modern AI-driven experiences

<https://elitepos.chat> (Username: admin@pos.com, Password: admin123)

- Comprehensive restaurant POS solution with full inventory management and Kitchen-to-Table (KOT) order systems
- Multi-location support with real-time analytics, employee management, and customer loyalty program integration
- Enterprise features including barcode scanning, discount management, payment processing, and offline mode capabilities
- Professional contact infrastructure (support@elitepos.chat, sales@elitepos.chat, 1-804-360-1129)

Government Contracting & Financial Intelligence

<https://contracts.orderlybite.com>

- Pioneered government contract management platform that searches government contracts and provides AI-powered contract analysis
- Automated RFP/RFI generation using templates and company information for streamlined proposal creation
- Market disruption innovation entering complex government procurement space traditionally dominated by established players
- High-risk, high-reward entrepreneurial thinking targeting specialized B2G market segment

<https://cashflowapp.app>

- Sophisticated financial management application providing real-time cash flow forecasting and business intelligence
- Predictive algorithms using aggregated transaction data for daily sales forecasts and cash flow predictions
- Mobile-first design for on-the-go business management with multi-currency support
- Employee access controls and enterprise-grade security for sensitive financial data

Cybersecurity & AI-Powered Security Intelligence

<https://security.orderlybite.com>

- Comprehensive AI-powered cybersecurity platform featuring incident management, threat intelligence, and compliance monitoring with advanced workflow automation
- Security Orchestration, Automation and Response (SOAR) integration with visual workflow builder for automated incident response and threat mitigation
- AI-Generated Security Workflows using machine learning-powered recommendations integrated with MITRE ATT&CK Framework for enterprise cybersecurity knowledge base
- Advanced Technical Architecture featuring React frontend with runtime configuration, Node.js API services, Python ML API, and multi-service Docker containerization
- Enterprise Data Management with 15+ security incidents tracking (malware detection, data exfiltration, brute force attacks) and 18+ threat intelligence indicators
- Multi-Framework Compliance supporting GDPR, ISO 27001, NIST, PCI DSS, HIPAA, and SOX with automated compliance reporting and monitoring
- Microservices Architecture with PostgreSQL data persistence, Redis caching, Elasticsearch analytics, Kafka event streaming, and nginx SSL/TLS proxy
- Production-Ready Deployment with automated database seeding, health monitoring, dynamic configuration management, and cost-effective maintenance requiring no rebuilds for configuration changes
- Custom Security Automation Nodes including email analysis, file hash verification, network monitoring, behavioral analysis, and threat intelligence

workflows

Financial Trading & Investment Intelligence

<https://stockstrategy.info> (Username: admin@trading.com, Password: admin123)

- Comprehensive AI Trading Platform with advanced portfolio management and real-time market analysis
- Portfolio performance tracking with detailed metrics showing Total Value (\$150,000.00), Cash Balance (\$10,000.00), and Day Change analysis (+\$1,500.00, +1.00%)
- Multi-timeframe performance analytics including YTD, one-day, one-week, one-year, one-month, inception, six-months, and three-months performance tracking
- Professional trading interface with Buy, Sell, Transfer, Edit, and Delete functionality for comprehensive portfolio management
- AI-powered market analysis with real-time data integration and performance forecasting capabilities
- Secure authentication system with admin-level access controls for sensitive financial data management

Business Process Automation & AI Services

<https://omniassistai.com>

- Virtual assistant services platform targeting startups and small businesses for comprehensive business support
- Admin, marketing, and web task automation streamlining operations for resource-constrained organizations
- Scalable service delivery designed to grow with client business needs

<https://serviqai.com>

- AI-powered service solutions platform providing comprehensive business automation capabilities
- Versatile service architecture adaptable to diverse industry requirements and business models

Technical Architecture Excellence

Innovation Framework Demonstrated Across Portfolio:

- Consistent AI integration with Vision AI, contract analysis, menu optimization, predictive analytics, and trading algorithms
- Multi-channel communication systems incorporating SMS, voice call, and web-based interfaces
- Secure authentication architectures with user management and access controls across all platforms
- Scalable cloud-based infrastructure supporting multi-location, high-volume transaction processing
- Real-time data processing with analytics dashboards for business intelligence and trading insights

Market Strategy & Competitive Positioning:

- Industry diversification reducing risk through legal, hospitality, government, financial, trading, and cybersecurity sector coverage
- SMB accessibility focus making enterprise-grade AI tools available to smaller businesses
- Professional business operations with established contact information, support systems, and Richmond, VA presence
- Technology convergence leadership integrating emerging AI capabilities into practical business solutions

GitHub Development Portfolio: <https://github.com/eakarsu>

Repository includes various projects demonstrating full-stack development capabilities, iOS development experience, and Ruby on Rails expertise, showcasing the technical foundation supporting the AI platform ecosystem.

Professional Experience

Lead Machine Learning Architect

Lowe's Companies, Inc. | Charlotte, NC (Remote) | Jan 2024 - Present

- Developing advanced system to curate and select optimal images from vast databases using state-of-the-art ML transformer models for enhanced product displays and user engagement
- Leading Project Quota Assistance system powered by Generative AI to provide immediate, accurate answers for resource allocation optimization and project management efficiency
- Architecting enterprise-scale ML solutions that directly impact customer experience and operational efficiency

Principal Software Engineer

Lowe's Companies, Inc. | Mooresville, NC | Oct 2020 - Present

- Design and build critical features for Lowe's.com including workflow applications for Apache Beam data pipelines and Elastic Search frameworks
- Engineered pivotal e-commerce features including free delivery, expedited delivery, and promotions through end-to-end software lifecycle management and Spark application development
- Reduced client costs significantly while elevating feature quality through automated build processes optimizing long-term maintenance
- Spearheaded project roadmaps serving as single-threaded leader between senior VPs and engineering teams, prioritizing end-user impact while maintaining regulatory compliance
- Enhanced cloud-based search experience with near-real-time indexing and product ingestion processes using Couch Base and Solr

Senior Software Architect

Wipro Limited | Richmond, VA | May 2018 - Oct 2020

- Architected products on Solr for blockchain and cryptocurrency customers, creating groundbreaking features including profit sharing with nominal interest fees and security schemas for borrowed tokens
- Reduced product indexing time by 9x (from 360 to 40 minutes for 5 million products) through ETL process optimization using Scala, Spark, Couchbase, and Solr
- Constructed Lowe's enterprise search infrastructure on Google Cloud using Terraform, Packer, Ansible, and Jenkins for automated deployment
- Developed expertise in blockchain technologies including NextJS Web Frontend, Web3, Remix, and Solidity

Master Software Engineer

Capital One | Richmond, VA | Aug 2016 - Dec 2017

- Led design of data flows and sandbox environments for API development and service virtualization frameworks
- Overhauled developer.capitalone.com website leading team efforts using Protractor, Cucumber, Spring Framework, NodeJS, JavaScript, Express, and AngularJS
- Produced fully automated API testing without user input via MVC, Swagger, FSM, and Graph Computing
- Enhanced multiple web features presented in company-wide meetings

Senior Software Developer

pExchange | Richmond, VA | Dec 2017 - Mar 2018

- Designed user management system for presidential budget preparation using Spring Boot, MongoDB, Angular, and Apache Shiro for user roles and permissions
- Augmented team productivity by assessing and implementing standard software

toolsets

Software Engineer

Cisco Systems | Richmond, VA | Nov 1999 - Jul 2007

- Worked on unified communications software contributing to enterprise communication solutions

Senior Software Analyst/Technical Lead

Ferguson Enterprises | Jul 2007 - Jul 2016

- Led multiple web development projects for enterprise-level solutions

Independent Software Consultant

Self Employed | Sep 2003 - Aug 2017 (14 years)

- Built complete Turkish search engine for food retail chain using big data pipelines, Apache Nutch/SOLR/Hadoop/Node.js/Bootstrap with 15 ranking criteria
- Achieved 99.5% extraction success rate implementing rule extraction in XQUERY for 700K lines of COBOL code (237 files)
- Renovated government websites using Angular and NodeJS, leading entire software development lifecycle
- Developed SOA Router/Proxy using .NET technologies for secure intra-company web services
- Created Oracle WCI API for Navy portal systems with automated portal execution

Education

PhD, IDE for Grid Computing | Syracuse University | 1994-1999 | GPA: 3.8

- Dissertation: Multi-tiered mini component model (Gateway) - pioneering computing portals work with CORBA component model implementation
- Led government-funded projects developing WebFlow Middleware, DARPA, QS, LMS, and Gateway applications

Master of Science, Computer Science | Syracuse University | 1994-1996 | GPA: 3.7

Master of Science, Computer Engineering | Istanbul Technical University | 1991-1993 | GPA: 3.5

Bachelor of Science, Computer Engineering | Ege University | 1986-1991 | GPA: 3.0

Certifications

- Unsupervised Learning, Recommenders, Reinforcement Learning | Coursera | Sep 2022
- Machine Learning: Regression and Classification | Coursera | Jul 2022
- Machine Learning: Advanced Learning Algorithms | Coursera | Jul 2022
- Neural Networks and Deep Learning | Coursera | Jul 2022

Core Technical Competencies

AI & Machine Learning

- ML Transformer Models, Vision AI, Generative AI
- Neural Networks, Deep Learning, Reinforcement Learning
- Document Processing, Contract Analysis, Image Curation
- Predictive Analytics, Business Intelligence, Trading Algorithms
- Cybersecurity AI: Threat detection, incident analysis, workflow automation
- Security Orchestration: SOAR platforms, MITRE ATT&CK integration

Programming & Development

- Languages: Java (59 endorsements), JavaScript, Python, Scala, C#, PHP
- Frameworks: Spring/Spring Boot, Angular, NodeJS, Apache Beam

- Technologies: XML (60 endorsements), XQUERY, SOA (48 endorsements)

Big Data & Cloud

- Big Data: Apache Spark, Hadoop, Solr, Elasticsearch, Couchbase
- Cloud Platforms: Google Cloud, Terraform, Packer, Ansible
- Databases: MongoDB, MS-SQL, Oracle, Couch Base

Enterprise Systems

- DevOps: Jenkins, CI/CD, Automated Testing
- Architecture: Microservices, API Development, Service Virtualization
- Security: Authentication, Authorization, SSL, Token Management
- Security Platforms: SIEM integration, compliance automation, threat intelligence

Financial Technology

- Trading Platform Development: Portfolio management, real-time market data integration
- Risk Assessment: Multi-timeframe performance analytics, trading algorithm development
- Financial Data Processing: Real-time trading interfaces, secure financial authentication systems

Key Achievements

- 10 AI-powered platforms built and deployed across multiple industries including cybersecurity with professional operations and user bases
- Enterprise cybersecurity platform with automated security workflows, SOAR integration, and multi-framework compliance monitoring
- 20+ years enterprise experience with Fortune 500 companies (Lowe's, Capital One, Cisco)
- 99% accuracy achieved in PDF data extraction using proprietary Vision AI algorithms
- Comprehensive trading platform with portfolio management tracking \$150,000+ in assets
- 9x performance improvement in product indexing (360 to 40 minutes for 5M products)
- 99.5% extraction success rate from 700K lines of legacy COBOL code
- PhD in Computer Science with pioneering work in distributed computing portals
- Multiple certifications in machine learning and neural networks
- GitHub portfolio demonstrating diverse technical capabilities and ongoing development

Industry Expertise

- Enterprise E-commerce (Lowe's.com features, search infrastructure)
- Financial Trading & Investment (AI trading platform, portfolio management, market analysis)
- Government Contracting (US Navy portals, budget systems, contract analysis)
- Financial Services (Capital One APIs, cash flow forecasting, fraud detection)
- Legal Technology (Document generation, compliance automation)
- Cybersecurity & Information Security (AI-powered threat detection, security orchestration, compliance automation, incident response workflows)
- Blockchain & Cryptocurrency (DeFi protocols, lending platforms)
